

My Own Inner Trilobite

Project

A participatory workshop for soil literacy and ecological awareness

- Developed by artist duo Fuzzy Earth as a public engagement project
- Combines science and art in a hands-on, multisensory workshop
- Aims to improve soil literacy and promote citizen action
- Connects urban consumers to ecological issues in food production
- Addresses overuse of synthetic fertilizers, crop monocultures, and phosphorus crisis
- Encourages composting and conscious consumer behaviour
- Highlights the role of soil in food systems and climate resilience

Workshop structure:

- Soil Analysis – Examine local soil using scientific & sensory methods (texture, sound, taste)
- Storytelling – Time-travel journey exploring soil formation, memory, and food connections
- Soil Healing – Sculpt “decomposing fossils” with biochar, lime, and compost to enrich soil

Fuzzy Earth

- Founded by Tekla Gedeon & Sebastian Gschanes
- Operates across architecture, design, art, agriculture, and tech
- Focuses on multispecies entanglements and ecological storytelling
- Uses speculative design to explore new human–nonhuman relationships
- Projects challenge and reimagine industrial, botanical, and ecological systems
- Works in unconventional sites: gardens, market halls, public spaces
- Engages communities to foster resilient and regenerative futures

“ Multi-stakeholder
engagement to strengthen
regional bioeconomy
value-chains ”
